SUMMARY

Data Analyst with professional experience extracting, analyzing, and visualizing data using SQL, Python, and Power BI, with a focus on turning raw data into clear and automated reporting. Proficient in using AI tools and automation to accelerate insight delivery.

SKILLS

Programming: SQL, Python (Pandas, NumPy, Scikit-learn), R

Statistical Modeling & Analytics: Exploratory Data Analysis, Time-Series Forecasting, Classification, Regression, A/B Testing, Causal Inference

Data Engineering: ETL/ELT, Data Pipelines, dbt, BigQuery, Data Quality

BI & Visualization: Power BI, Tableau, Streamlit

AI & Tools: AI-Assisted Development (Claude, Codex), Git, Power Automate

EXPERIENCE

Data Analyst (Student Consultant) | *Pierce Transit, Lakewood, WA* *June 2025 - June 2026*

- Wrote SQL queries, including multi-table joins, aggregations, and subqueries, to build reusable KPI views and support ad hoc analysis requests across finance, operations, and planning teams.
- Found that the maintenance cost table feeding indirect cost calculations contained 84 rows of placeholder zeros, flagged the anomaly, traced the root cause, and built data quality checks into the pipeline before it could distort downstream reporting.
- Built and validated a SARIMAX time-series forecasting model, accurate to within about 3% of actual demand on unseen data and translated the results into a fare-policy recommendation presented directly to agency leadership.
- Built a comprehensive Power BI dashboard and a Streamlit-based decision-support tool that let stakeholders run cost and fare scenarios interactively, and presented it live to agency leadership and the board.
- Held regular check-ins with agency leadership throughout the engagement, providing status updates and escalating issues for clarity, approval, or discovery as needed.

Network Engineer | *Helmut Comm, Sydney, NSW* *Nov 2022 - Feb 2025*

- Managed network infrastructure (Cisco routers, switches, SD-WAN) across four test facilities and built Python-based reporting workflows that automated 3 daily and 2 weekly reports, saving approximately 90 minutes of manual review time per workday.

PROJECTS

TaskFlow Growth Analytics | Python, BigQuery, dbt

- Built a growth analytics pipeline on synthetic data for a simulated B2B SaaS company, covering funnel, retention, A/B testing, and churn analysis.
- Used causal inference to show a feature that appeared to drive a 9x lift in upgrades actually had a near-zero effect once selection bias was removed.

Seattle Rental Neighborhood Finder | Tableau, Python, GeoPandas

- Built an interactive Tableau tool using parameter actions, LOD expressions, and dashboard actions to guide renters through a step-by-step questionnaire and narrow a live choropleth map of Seattle's 53 neighborhoods to a personalized top 3 match.

EDUCATION

University of Washington, Tacoma, WA
Master of Science, Business Analytics | STEM *- Jun 2026*

University of New South Wales, Sydney, NSW
Master of Engineering, Telecommunications Engineering *- Feb 2021*
